

Senior Full Stack Developer (f/m)

You're a seasoned developer and like to work with modern web technologies both on the frontend and backend? You want to leave a mark in the healthcare market and build things that actually benefits people? You'll fit right in with us at Temedica!

Temedica's vision is to transform the current healthcare system, improve medical services and bring the individual patient back into the focus. Using modern technology, patients are accompanied on their individual journey outside hospitals, doctors' offices and therapist practices. By combining physical activity, body awareness and provision of therapy-fostering medical knowledge patients can work on improving their health individually and in the long run prevent health issues.

Your tasks:

As a full stack developer, you'll be part of our development team and work closely with our product team to build our web-based therapy platform and hybrid native apps. You'll use modern web technologies to build performant, well-functioning and user-friendly mobile web apps as well as help us further develop our platform and digital health assistant.

This means:

- Build web apps, APIs and libraries with Ruby/Rails
- Develop single page applications and components with Vue.js and native shells for our hybrid apps with React Native
- Work closely with our CTO to design a stable and flexible software platform that will be our company's core technology for years to come
- Help your fellow developers with feedback and code reviews
- Take part in improving our internal and external infrastructure and task automation

Here's what we have to offer:

- We have an international team, located across Europe with our headquarters in a bright and spacious office in the heart of Munich
- We put our trust in you from the start and your input matters greatly to us from day one
- We host regular team events and provide free coffee* and fruit

What you should to bring to the job:

- You have several years of experience in building real-world web and/or mobile apps and the portfolio (GitHub, Bitbucket or similar) to prove it
- You have a deep desire to immerse yourself in a product and make it come alive
- You have built at least a couple of apps/tools with Ruby (preferably Rails) and/or JavaScript (preferably Vue.js or React)
- Experience with the following things would be beneficial: Git; JIRA; Travis CI; Heroku; Amazon Web Services
- You are a team player but can also work self-reliant and with minimal guidance
- You're fluent in English (written and oral). Being able to at least read German is a huge plus since all texts in our apps and websites are currently only available in German.
